

Atlantic Station, September 2004

Brian Leary presented us with his ongoing vision for the project, to be complete in 2006. Brian is the Vice President of Design and Development for Atlantic Station, LLC - the joint venture partnership redeveloping the Atlantic Steel Property.

Brian graduated from GA Tech's College of Architecture with a BS in Architecture and a Masters in City Planning. Before graduating, he finished his thesis outlining a plan to redevelop the property through the creation of a 24-hr, live-work-play community.

Much of this information can be found on The Atlantic Station website, but of special interest were Brian's personal anecdotes on; negotiations with the DOT, EPA, and many other government institutions, as well as, the development and design of the Spring Street bridge, and the positive impact of the development on neighboring property values.
