

# **Sustainability and LEED, March 2004**

On March 10th, a group gathered at Corporate Environments to learn more about "Green Facility Issues." Holley Henderson, a LEED Accredited Professional, gave a great overview of LEED and the different areas of certification. Tresa Banks with GreenGuard shared information about GreenGuard Certification and the impact of indoor air quality on everyone. And, Laura Case gave us some great examples of the "green" projects that are being undertaken on the Emory Campus.

Everyone in the room left with a better understanding of Sustainable Issues and how they can implement them into their projects. Plus, the case studies that were right here in Atlanta were great from a cost analysis standpoint.
